

Migration Creation

Command	Description
<code>php artisan make:migration create_users_table</code>	Create a new migration file (use your desired name).
<code>php artisan make:migration add_column_to_users_table</code>	Create a migration to modify a table (like adding/removing columns).

Running Migrations

Command	Description
<code>php artisan migrate</code>	Run all pending migrations.
<code>php artisan migrate --path=/database/migrations/2024_01_01_000000_custom_migration.php</code>	Run a specific migration file.
<code>php artisan migrate --force</code>	Run migrations in production (be cautious!).

Rolling Back Migrations

Command	Description
<code>php artisan migrate:rollback</code>	Rollback the last batch of migrations.
<code>php artisan migrate:rollback --step=1</code>	Rollback the last 1 batch (you can change the step number).

Command	Description
<code>php artisan migrate:reset</code>	Rollback all migrations.
<code>php artisan migrate:refresh</code>	Reset and re-run all migrations.
<code>php artisan migrate:refresh --seed</code>	Refresh and re-run all migrations and seeders.

Fresh Start

Command	Description
<code>php artisan migrate:fresh</code>	Drop all tables and re-run all migrations from scratch.
<code>php artisan migrate:fresh --seed</code>	Same as above, but runs seeders too.

Migration Status

Command	Description
<code>php artisan migrate:status</code>	Show which migrations have run and which haven't.
